MEMORY

SELECT VS REMEMBER

memory

USERS IN CONTROL

The *action bar* is a dedicated piece of real estate at the top of each screen that is generally persistent throughout the app.

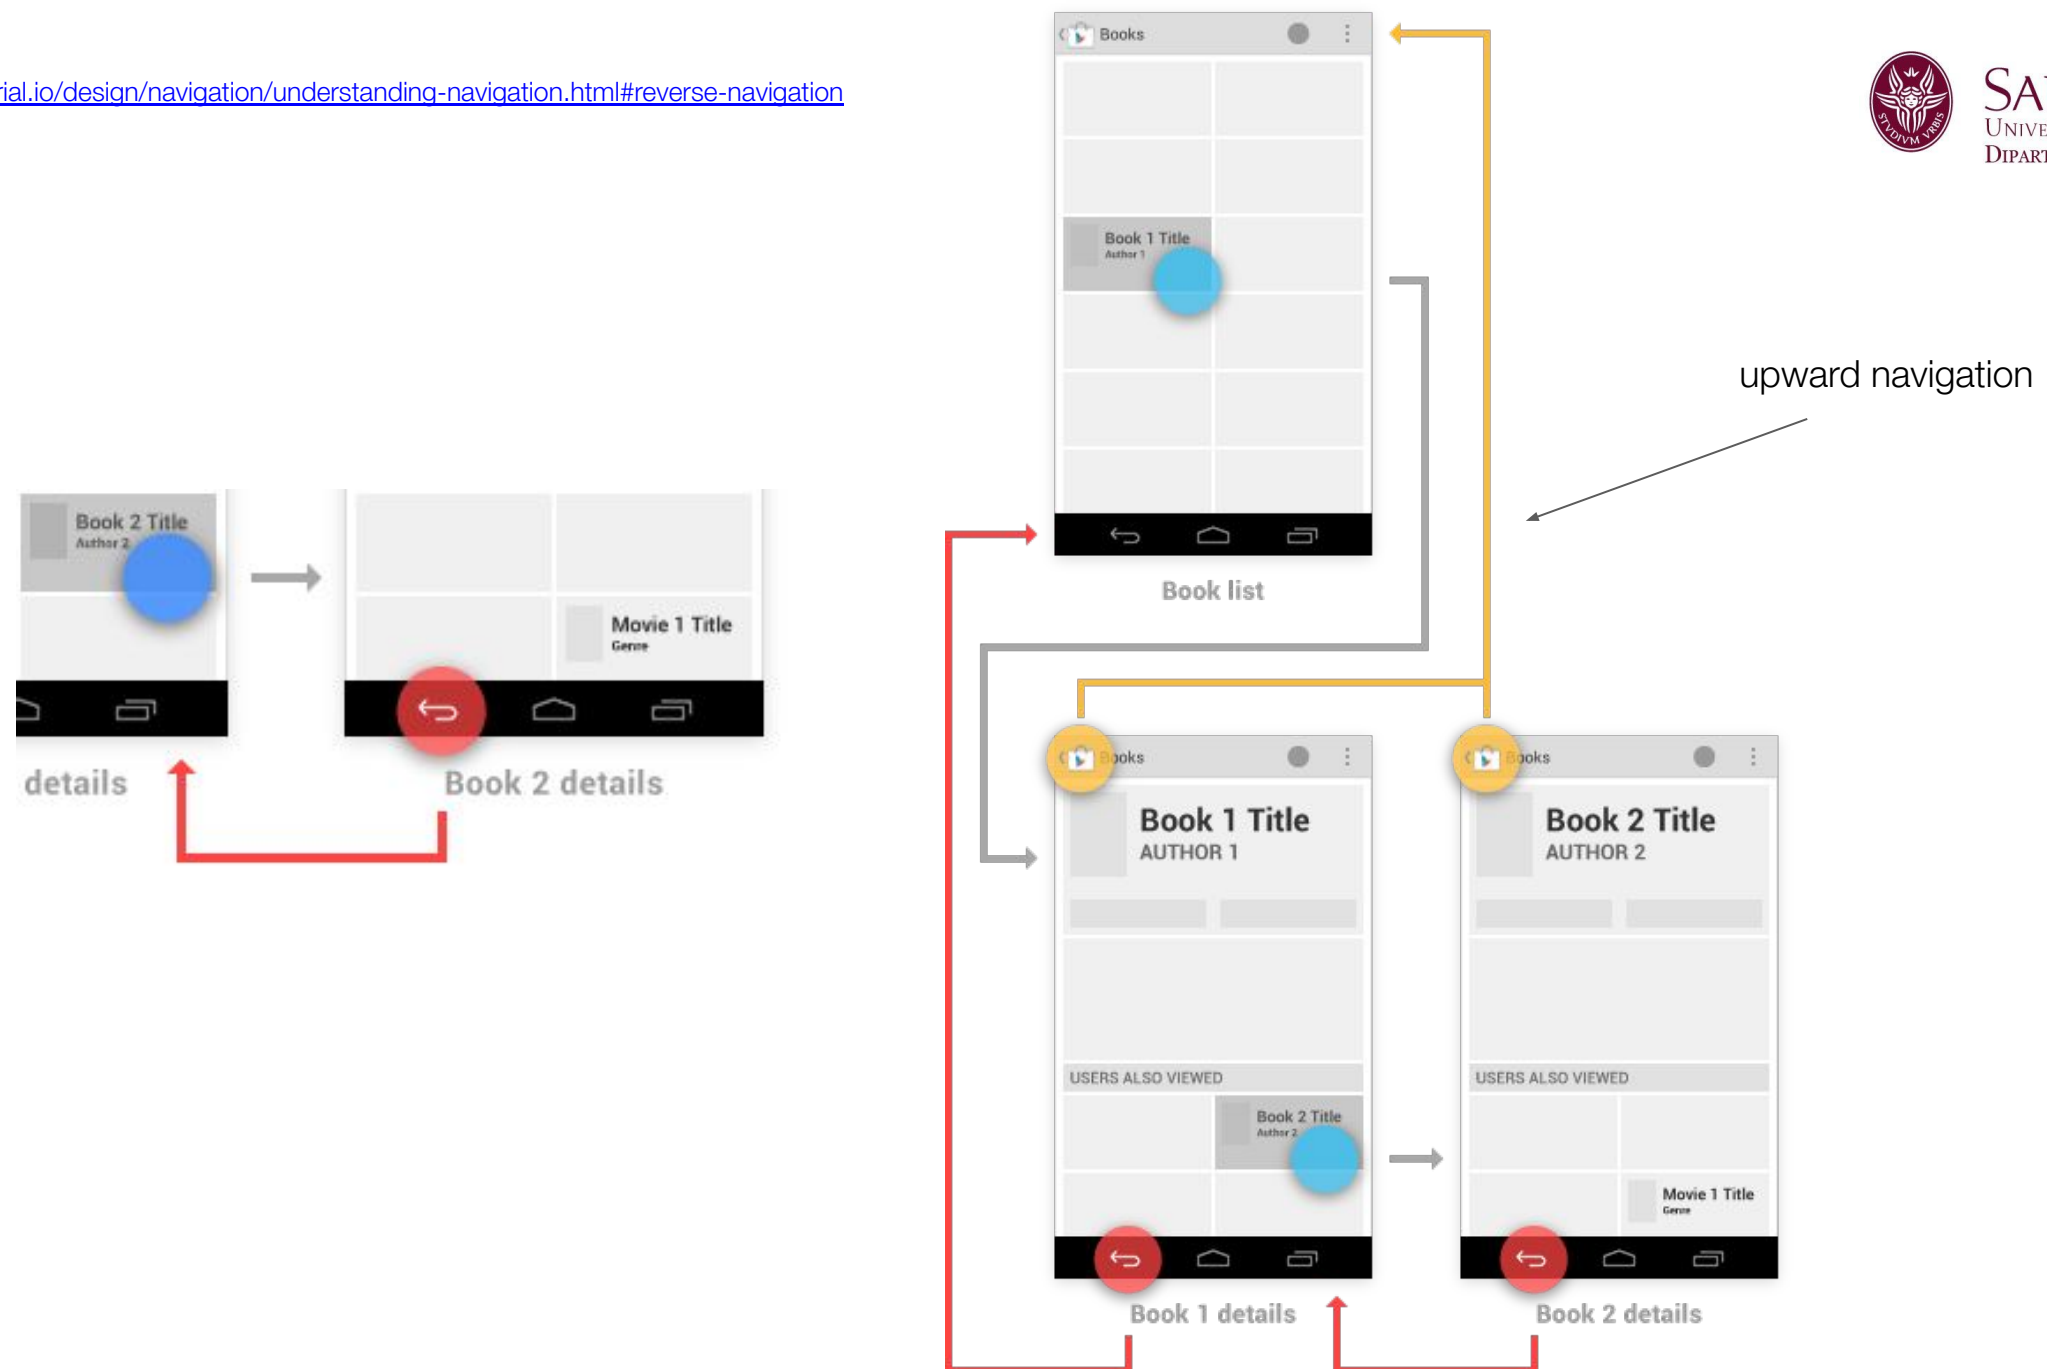

DEVELOPER DOCS
Action Bar

It provides several key functions:

- Makes important actions prominent and accessible in a predictable way (such as *New* or *Search*).
- Supports consistent navigation and view switching within apps.
- Reduces clutter by providing an action overflow for rarely used actions.
- Provides a dedicated space for giving your app an identity.
